

Gaylon Nunn - Northwest Custom Computer & Network Systems.

Cimtech Inc. Computer & Network Systems Technical Associate.

Gaylon has been in the manufacturing industry since 1971. Starting as an apprentice machinist in Tacoma, WA and advancing to numerical control programming and injection mold design and manufacture. This allowed him great exposure to very sophisticated CAD/CAM./CIM systems and later translated into full time computer and network systems support.

For the past fifteen year Gaylon has provided support for designing and implementing reliable network systems for manufacturing. This would include manufacture of specialized computer systems leaning strongly toward CAD/CAM/CIM needs, file and application servers and desktop systems.

Gaylon has very strong analytical qualities that allow him to quickly solve problems with hardware and software issues and help desk services.

Some services Gaylon can provide include:

1. Build reliable custom computer systems specific to the applications at had.
2. Recommend and implement off the shelf hardware and software solutions.
3. Install maintain and correctly configure software including business systems and CAD/CAM/CIM systems and desktop applications.
4. Analyze install and implement network security systems both hardware and software.
5. Design and implement backup and disaster recovery systems.
6. Setup of FTP servers.
7. Troubleshoot and repair of computer systems including PCs, servers and peripherals.
8. Troubleshoot and repair of Malware, Trojan, Virus and Adware infections.
9. Troubleshoot and repair of network issues including cabling, hardware and software.
10. Setup and interface machine tools or other devices to the computer network for data access.
11. Setup, maintain and troubleshoot network printers and multifunction devices.
12. Installation of Ethernet switches, routers (both wired and wireless) and related hardware. Including setup of proper security of wireless networks to avoid any unwanted intrusion.
13. Analyze current computer systems and make recommendations for upgrades for better productivity and security.

Of course this is just a short list of the basic services Gaylon has to offer do to his background and extensive experience working in the computer systems and manufacturing field for many years. His knowledge of computers systems comes mostly from many years of hands on experience and self training in the field in real world working environments.
