

## **Hank Iszley**

Hank Iszley is a technical associate with Cimtech. He began working as draftsman and then a machinist for Boeing over 40 years ago. He's worked as an inspector, programmer, tool maker and machinist using Mastercam. Now he's a contract programmer, assisting with 2- to 5-axis projects including the F22 and F35 fighter jets.

"I like the creative nature of programming," he says.

Hank is sometimes called on to create model parts from blue prints. "There are planes still in use that were built before parts were created on computers. They still need new parts."

He has taught Mastercam, blueprint reading, shop math and inspection.
